Re: Operations & Maintenance Summary Monthly Report – November 2006
UniFirst Corporation, Wells G&H Site, Woburn, MA

Dear Mr. LeMay:

On behalf of UniFirst Corporation, I am submitting the report "Source Area & Operable Unit 1, Operations & Maintenance Summary Monthly Report" for the period November 1 through November 31, 2006.

Should you have any questions, please call.

Sincerely,

Timothy M. Cosgrave
Project Manager

1 Introduction

Harvard Project Services (HPS), as Operation and Maintenance Contractor of the groundwater recovery and treatment system (System) at UniFirst Corporation, 15 Olympia Avenue, Woburn, Massachusetts, has prepared this report. The System, which started pumping on September 30, 1992, is part of the ongoing Remedial Action of the Wells G&H Superfund Site in Woburn, Massachusetts. This report describes the groundwater recovery and treatment activities for the period November 1 through November 30, 2006 and identifies future RD/RA activities at the site.

2 System Operation & Maintenance

2.1 Maintenance

Activities during the reporting period at the Treatment Plant are summarized in the Maintenance Summary Table.

UniFirst Treatment Plant Maintenance Summary

Date	Activity	Company
November 7	Routine Site Visit Monthly Sampling	HPS
November 9	Alarm Response	HPS
November 15	Routine Site Visit	HPS
November 21	Routine Site Visit	HPS
November 27	Alarm Response	HPS
November 30	Routine Site Visit	HPS

2.2 Treatment System Process Flow & Pressures

The total monthly flow through the System for the reporting period was 1.35 million gallons. The average flow during this period was approximately 31.2 gallons per minute. The average hourly flow rate in gallons per minute is depicted in Figure 1. Two alarms during the month likely were caused by brief power outages.

The average hourly carbon pressure at the influent to the primary tank during the month was 12.9 psi. The trend of the carbon system pressure is illustrated in Figure 1. The process flow through the carbon vessels was Tank 2 to Tank 3a to Tank 4a.

2.3 Drawdown Elevation in UC22

During the reporting period, the average hourly pumping water level elevation in well UC22 was approximately 23.7 feet. The water level elevations for the month are shown on Figure 1.

3 Treatment System Performance

The effectiveness of the treatment system is monitored by monthly sampling and analysis. Analytical samples for routine monitoring were collected on November 7, 2006 from sample points S1, S5C1, S5C2 and S6. Monthly analytical results are summarized in the attached table, "Water Quality Summary."

4 Future Activities

Operation and monitoring of the groundwater extraction and treatment system will continue. Routine monthly samples will be collected on December 6, 2006 and January 2, 2007.
